

CHAPTER V

CONCLUSIONS AND SUGGESTIONS

This chapter presents: (1) conclusion, and (2) suggestion, all the result from the findings had been concluded. I also present some suggestions that were expected to be useful for the next researchers, teachers and the school.

1.1 Conclusions

In conclusion, based on the data findings, students still encountered many kind of problems in English speaking activity. In this study, there were six themes of problem found related to the findings. First problem was students' had lack of pronunciation, second problem was students' had lack of vocabulary, third problem was students' had lack of grammatr, fourth students' inhibition, next problem caused by lack of necessary teaching facility, then the last problem was students had lack speaking opportunity.

5.2 Suggestions

This study only focused on to find out the problem that encountered by students in English speaking activity because the limitation time of conducting the research. I hope the next researcher who wants to conduct the same similar topic research can elucidate clearly the teacher's strategies in dealing with the problems that encountered by students and elucidate deeply the factors that cause the students' problem in study which did not explain clearly in my study.

Afterwards, based on what I found in this study, I really expect the teachers could find the best strategies to bring the students out of their problem in speaking. And I expect that teacher keep being patient more and more for those who faces problem in learning because many factors that influence students learning process. I expect the other teachers could learn from my findings and find the best solution for those problems.

Last, by knowing the problem in teaching speaking comes up from teaching facility, I really expected that the school could find the best solution to help the teacher cope this situation.
