Abstract

This study aims to determine the effect of Current Ratio on Stock Prices with Capital Structure (DER) as the intervening variable. The population of this study is the companies in the consumer goods sector registered in 2014-2018 amounted 29 companies in total. Samples used are only 10 companies, which were selected based on purposive sampling method. Using path analysis, the results of the study showed that Current Ratio has a negative effect on the Capital Structure (DER), and Capital Structure (DER) was able to mediate the effect of the Current Ratio on the Stock Prices.

Keywords: Current Ratio, Capital Structure (DER) and Stock Prices
