This study attempts to investigate how stock prices of Islamic Commercial Banks are affected by Return on Assets, Net Profit Margin, and Earnings Per Share over the years 2018–2022. This study is quantitative, and the study's research subject is the Indonesia Stock Exchange's Islamic banking sector from 2018 to 2022. There were 60 samples used in all. taking samples using a purposeful sampling technique. The traditional assumption test, panel data test, and data processing with Eviews 12 make up the data analysis technique employed.

The results of this study indicate that Return On Assets and Net Profit Margin have no effect on stock prices at Islamic Commercial Banks in the observation period while Earning Per share has an effect, while simultaneously, ROA, NPM, EPS have an effect simultaneously on stock prices.

Keywords: *Return On Assets, Net Profit Margin, Earning Per share, stock prices*
