Title : The Relationship Between Self Control And
Online Gambling Addiction In Adolescents in
Tanjung Tebat, South Lahat, Lahat Regency

This research aims to determine the relationship between self control and online gambling addiction in adolescent in Tanjung Tebat Village, South Lahat. Self control plays an important role in the level of online gambling addiction among teenagers. This research uses quantitative research methods with a correlation analysis of Pearson's product moment. The subject of this research are teenagers in Tanjung Tebat Village, South Lahat, totalling 79 people. This research uses total sampling techniques and data collection using a self control scale and an online gambling addiction scale. Based on the results of hypotesis testing with a significance level of 0,000 ($p < 0,05$) and a value of $r = -0,552$, it shows a negative relationship between self control and online gambling addiction. This means that the higher the self control, the lower the level of online gambling addiction, on the other hand, if the lower the self control, the higher the online gambling addiction. Therefore, the hypothesis proposed in this research is accepted.
